

WEEK 3 LAB

Configure Your AI Workspaces and Requirements Trail

A 45-minute continuation of the individual GitHub workflow established in Week 1

MODE	IN CLASS	TOOLS	NEXT
Individual	45 minutes	GitHub + ChatGPT + Claude	Week 4 RAG

SAME ASSIGNMENT FOR EVERY STUDENT

Every student opens the same Week 3 issue, creates the same branch and requirements file, configures both ChatGPT and Claude, runs the same critique prompt, makes one human decision, updates the AI Use Log, and opens a pull request. Students may compare screens and help one another, but nobody receives a team-lead-only task.

The Week 1 → Week 2 → Week 3 story

Earlier work	What it produced	What you use today
Week 1 — GitHub foundation	Individual repository, Issue #3, GitHub flow, AI Use Log.	You reuse the same repository and repeat the familiar issue → branch → file → pull-request path.
Week 2 — Team discovery	Approved hopes/fears discussion, evidence clusters, empathy map, and anonymized evidence.	You bring two approved evidence items and one unresolved assumption into your own specification.
Week 3 — Requirements	A bounded user journey, requirements, MVP boundary, and AI critique.	The file becomes the known starting point for Week 4’s RAG architecture comparison.

IMPORTANT CORRECTION

Students often call persistent instructions a system prompt. On the ChatGPT and Claude websites, you are configuring account instructions and project instructions—not replacing the provider’s highest-level system rules. For this course, project instructions are the precise semester workspace.

The 45-minute clock

Part	Minutes	Finish line
1. Reopen the Week 1 trail	5	Week 3 issue and linked branch open
2. Configure ChatGPT	10	Settings reviewed and CampusConnect Project created
3. Configure Claude	10	Settings reviewed and CampusConnect Project created
4. Create Requirements Specification v1	10	Known Week 4 file path in GitHub
5. Run one controlled critique	6	One suggestion from each tool and one human decision
6. Preserve and submit the trail	4	AI log updated and pull request opened

What you will submit

1. GitHub pull request for branch docs/week-3-requirements-ai.
2. docs/requirements/week-3/REQUIREMENTS_SPEC_V1.md with the marked blanks completed.
3. One ChatGPT Project and one Claude Project named COMP-7431 CampusConnect.
4. Section 6 showing one ChatGPT suggestion, one Claude suggestion, and your decision.
5. One new Week 3 row in docs/ENGINEERING_AI_USE_LOG.md.

PRIVACY BOUNDARY

Use only anonymized Week 2 evidence or instructor-provided examples. Do not upload interview identities, grades, accommodations, private email, credentials, API keys, production data, or unapproved IT Support documents.

Before class — sign in without starting the clock

1. Open your individual GitHub repository from <https://github.com/>.
2. Open ChatGPT and sign in: <https://chatgpt.com/>.
3. Open Claude and sign in: <https://claude.ai/>.
4. Keep your Week 2 evidence summary or empathy map nearby. You need only two anonymized evidence items and one assumption.

Part 1 — Reopen the Week 1 trail (5 minutes)

Step 1 — Open the Week 3 issue

Use this tool	Where you should be	Visible finish line
GitHub website	Your individual repository > Issues	Open issue Week 3: create Requirements Specification v1 and AI workspaces.

1. Open your individual CampusConnect repository.
2. Select Issues.
3. Open the issue titled Week 3: create Requirements Specification v1 and AI workspaces. You created this starter issue in Week 1.
4. If the issue is missing, select New issue, use that exact title, assign yourself, and submit it. This fallback keeps every student on the same path.

Step 2 — Create the Week 3 branch from the issue

Use this tool	Where you should be	Visible finish line
GitHub website	The open Week 3 issue	Development sidebar shows docs/week-3-requirements-ai.

1. In the issue's right sidebar, find Development and select Create a branch.
2. Branch name: docs/week-3-requirements-ai
3. Select Create branch. For this short lab, you may stay in the GitHub website; GitHub Desktop is not required for the Week 3 edits.
4. Confirm the branch appears in the issue sidebar.
5. If you need a visual reminder, open: <https://docs.github.com/en/issues/tracking-your-work-with-issues/using-issues/creating-a-branch-for-an-issue>.

Part 2 — Configure ChatGPT (10 minutes)

Step 3 — Review the two ChatGPT settings that matter today

Use this tool	Where you should be	Visible finish line
ChatGPT website	Profile menu > Settings	Custom Instructions saved; Data Controls reviewed.

1. Open ChatGPT: <https://chatgpt.com/>.
2. Open your profile menu, select Settings, then select Personalization.
3. Open Custom Instructions. Make sure Enable customization is on if your account allows it.
4. Paste the short Software Architect instructions below. Save them.
5. Return to Settings and select Data Controls.
6. Locate Improve the model for everyone. For a personal consumer account used in class, turn it off. If a school or employer manages the setting, do not override policy; record admin-managed in your AI Use Log.
7. Official Custom Instructions help: <https://help.openai.com/en/articles/8096356-chatgpt-custom-instructions>.
8. Official Data Controls help: <https://help.openai.com/en/articles/7730893-data-controls-faq>.

COPY / PASTE — ChatGPT account-wide instructions

I am a COMP-7431 student learning to work as a modern Software Architect.
 Give me plain-language, step-by-step explanations and concrete examples.
 Label assumptions instead of presenting them as facts.
 When architecture is involved, compare at least two reasonable options and explain the trade-offs.
 Do not invent stakeholder evidence, campus policies, requirements, citations, documents, or test results.
 Coach my graded work; do not make the final engineering decision for me.
 Warn me before I share names, student records, credentials, API keys, private email, or proprietary information.

WHY KEEP ACCOUNT INSTRUCTIONS SHORT

These instructions affect many ChatGPT conversations. CampusConnect-specific facts belong in the project created next, not in every unrelated chat.

Step 4 — Create the ChatGPT semester Project

Use this tool	Where you should be	Visible finish line
ChatGPT website	ChatGPT sidebar	Project named COMP-7431 CampusConnect with saved project instructions.

1. In the ChatGPT sidebar, select New project.
2. Name the project: COMP-7431 CampusConnect. Choose any classroom-appropriate icon or color.
3. Open the new project.
4. At the upper right of the project, select the three-dot menu, then Project settings.
5. Paste the CampusConnect Project Instructions below and save.
6. Do not upload Week 2 files today. The 45-minute lab uses only the small anonymized text you add to GitHub.
7. Start one chat inside the project and type: In one sentence, state your role and name one thing you must not invent.
8. A good response should identify requirements/architecture critic and should not invent evidence, policies, documents, requirements, or tests.
9. Official Projects help: <https://help.openai.com/en/articles/10169521-projects-in-chatgpt>.

COPY / PASTE — ChatGPT Project Instructions**ROLE**

Act as a requirements and architecture critic for the COMP-7431 CampusConnect project.

PROJECT CONTEXT

CampusConnect is a proposed, code-light assistant that may help students find current IT Support answers. Week 2 produced anonymized discovery evidence. Week 3 converts that evidence into a small Requirements Specification v1. Week 4 will compare a local LM Studio RAG path with a hosted rapid-prototype path.

SOURCE-OF-TRUTH RULES

1. Treat repository artifacts and approved Week 2 evidence as the source of truth.
2. Do not invent stakeholders, policies, source documents, requirement IDs, or tests.
3. Label important statements as EVIDENCE, INFERENCE, ASSUMPTION, or RECOMMENDATION.
4. Trace criticism to a requirement ID when one exists.
5. Check scope, testability, privacy, accessibility, source grounding, and safe failure.
6. Suggest the smallest useful revision; humans keep the final decision.
7. For unsupported questions, prefer an honest abstention and a helpful next step.

DEFAULT RESPONSE

Use four short sections: Supported; Ambiguous; Missing; Smallest useful revision.

Part 3 — Configure Claude (10 minutes)

Step 5 — Add Claude's account-wide instructions

Use this tool	Where you should be	Visible finish line
Claude website	Initials in lower-left > Settings	Instructions for Claude contains the same short architect instructions.

1. Open Claude: <https://claude.ai/>.
2. Select your initials in the lower-left corner, then select Settings.
3. Find Instructions for Claude. The exact surrounding menu labels may vary by plan or workspace.
4. Paste the same short Software Architect instructions used in ChatGPT and save.
5. Do not copy private profile facts, employer information, or student records into the instructions.

6. Official personalization help: <https://support.claude.com/en/articles/10185728-understanding-claude-s-personalization-features>.

REUSE THE EXACT WEEK 3 INSTRUCTION BLOCK

Paste the same ChatGPT account-wide instruction block printed in Part 2. Do not create a second version for Claude; the point is to give both tools the same operating expectations.

Step 6 — Create the Claude semester Project

Use this tool	Where you should be	Visible finish line
Claude website	Claude Projects page	Project named COMP-7431 CampusConnect with saved project instructions.

1. Open the direct Projects page: <https://claude.ai/projects>.
2. Select + New Project in the upper-right corner.
3. Name it COMP-7431 CampusConnect. The description may say: Requirements and architecture workspace for the CampusConnect semester project.
4. Open the project. On the project page, find the project knowledge area and select Set project instructions.
5. Paste the CampusConnect Project Instructions printed in the ChatGPT section and select Save instructions.
6. Do not add source documents today.
7. Start one chat in the project and type: In one sentence, state your role and name one thing you must not invent.
8. Compare the answer with the ChatGPT answer. Both should recognize the same boundaries even if their wording differs.
9. Official Claude Projects help: <https://support.claude.com/en/articles/9519177-how-can-i-create-and-manage-projects>.

REUSE THE EXACT CAMPUSCONNECT PROJECT INSTRUCTIONS

Paste the Project Instructions printed in the ChatGPT section. Keeping the text identical makes the later comparison fair: differences in the critique should come from the tools, not from two different instruction sets.

IF A MENU IS MISSING

Do not spend the class searching endlessly. Record not visible or admin-managed in the AI Use Log. Keep the project, start its first chat by pasting the Project Instructions, and continue. The graded evidence is that you established the same working rules in both tools using the closest available control.

Part 4 — Create Requirements Specification v1 (10 minutes)

Step 7 — Create the known Week 4 file path

Use this tool	Where you should be	Visible finish line
GitHub website	Your repository on branch docs/week-3-requirements-ai	docs/requirements/week-3/REQUIREMENTS_SPEC_V1.md exists on the Week 3 branch.

1. Return to the GitHub repository and select the branch dropdown above the file list.
2. Choose docs/week-3-requirements-ai. Stop if the page still says main.
3. Select Add file > Create new file.
4. In the filename box, type exactly: docs/requirements/week-3/REQUIREMENTS_SPEC_V1.md
5. GitHub interprets each slash as a folder boundary. This single filename creates requirements inside docs, then week-3 inside requirements, and finally the Markdown file.
6. Paste both starter blocks below into the same GitHub file. Paste Block 2 immediately after Block 1.
7. Replace only five marked items: your name, E-01, E-02, A-01, and later the AI critique fields. Use no real interview identities.
8. Select Preview above the editor and check that headings and bullets look normal.
9. Select Commit changes.
10. Commit message: docs: add Week 3 requirements specification v1
11. In the commit dialog, confirm Commit directly to the docs/week-3-requirements-ai branch, then commit.
12. Official create-file directions: <https://docs.github.com/en/repositories/working-with-files/managing-files/creating-new-files>.

COPY / PASTE — REQUIREMENTS_SPEC_V1.md — Block 1 of 2

CampusConnect Requirements Specification v1

Status: Draft — Week 3

Student: <YOUR NAME>

Branch: docs/week-3-requirements-ai

1. Problem statement

Students who need IT Support information need a reliable way to find the correct next step because the current experience may be scattered, difficult to search, or hard to verify as current.

2. Evidence carried forward from Week 2

- E-01: <PASTE ONE ANONYMIZED QUOTE OR OBSERVATION FROM THE TEAM EXERCISE>
- E-02: <PASTE ONE SECOND ANONYMIZED QUOTE OR OBSERVATION>
- A-01: <NAME ONE ASSUMPTION THAT STILL NEEDS VALIDATION>

3. One user journey inside the MVP

A student asks one typed IT Support question. CampusConnect searches only approved IT Support material, returns a short answer with a visible source, or says the available sources do not support an answer.

COPY / PASTE — REQUIREMENTS_SPEC_V1.md — Block 2 of 2**## 4. Four requirements**

- FR-01 — The system shall accept one typed IT Support question.
- GR-01 — Every factual answer shall identify the approved source used.
- SF-01 — If approved sources are insufficient, the system shall not invent an answer and shall provide a helpful IT Support next step.
- NFR-01 — A keyboard user shall be able to submit a question and read the result.

5. MVP boundary

IN: one typed question, approved IT Support material, one grounded answer, visible source, safe failure, and helpful next step.

OUT: password resets, ticket creation, personal student records, voice, automatic actions, and answers from unapproved material.

6. AI critique and human decision

- ChatGPT suggestion: <ADD ONE SHORT SUGGESTION>
- Claude suggestion: <ADD ONE SHORT SUGGESTION>
- My decision: Accepted / Revised / Rejected
- My reason: <EXPLAIN USING WEEK 2 EVIDENCE, SCOPE, OR TESTABILITY>

WHAT REQUIREMENTS SPECIFICATION V1 MEANS

It is not a GitHub command. It is the Markdown document you just created at a known repository location. In Week 4, Open Requirements Specification v1 means: open your repository, open docs, open requirements, open week-3, then select REQUIREMENTS_SPEC_V1.md.

Part 5 — Run one controlled critique (6 minutes)

Step 8 — Give both tools the same evidence and the same task

Use this tool	Where you should be	Visible finish line
GitHub, ChatGPT Project, and Claude Project	Requirements file plus one new chat in each CampusConnect Project	One short suggestion from each tool; no invented evidence accepted.

1. In GitHub, open REQUIREMENTS_SPEC_V1.md and select the Raw button or copy the visible Markdown text.
2. In the ChatGPT CampusConnect Project, start a new chat. Paste the critique prompt below, replacing the final placeholder with the full requirements text.

3. In the Claude CampusConnect Project, start a new chat. Paste the exact same prompt and requirements text.
4. Read both answers. Do not ask either tool to choose the final requirement for you.
5. Choose the most useful single suggestion from ChatGPT and the most useful single suggestion from Claude.
6. Decide Accepted, Revised, or Rejected for one suggestion. Your reason must refer to Week 2 evidence, MVP scope, or testability.

COPY / PASTE — Requirements critic prompt

Review the CampusConnect Requirements Specification v1 pasted below.

Do not rewrite the whole file and do not invent evidence.

Identify only the single most important problem.

Return exactly four lines:

1. Requirement ID or section
2. Specific problem
3. Why it matters
4. Smallest testable revision

Label any unsupported conclusion ASSUMPTION.

<PASTE REQUIREMENTS_SPEC_V1.md HERE>

Step 9 — Put the human decision back into GitHub

Use this tool	Where you should be	Visible finish line
GitHub website	REQUIREMENTS_SPEC_V1.md on the Week 3 branch	Section 6 names both suggestions and your decision/reason.

1. On the requirements file page, select the pencil icon to edit.
2. Scroll to Section 6.
3. Replace the ChatGPT and Claude placeholders with one short suggestion from each.
4. Choose Accepted, Revised, or Rejected and write your own one-sentence reason.
5. Commit message: docs: record AI critique and human requirements decision
6. Commit directly to docs/week-3-requirements-ai.
7. Official edit-file directions: <https://docs.github.com/en/repositories/working-with-files/managing-files/editing-files>.

THE AI IS A CRITIC, NOT AN AUTHORITY

Two tools may produce two plausible recommendations. Architecture work begins when a human evaluates those recommendations against evidence, scope, risk, and the ability to test the result.

Part 6 — Preserve and submit the trail (4 minutes)

Step 10 — Update the Engineering/AI Use Log

Use this tool	Where you should be	Visible finish line
GitHub website	docs/ENGINEERING_AI_USE_LOG.md on the Week 3 branch	One Week 3 row records both tools, the safe context, and human verification.

1. Open docs/ENGINEERING_AI_USE_LOG.md while the branch selector still says docs/week-3-requirements-ai.
2. Select the pencil icon.
3. Add the Markdown row below under the existing row. Replace the date and decision.
4. Commit message: docs: log Week 3 AI requirements critique
5. Commit directly to docs/week-3-requirements-ai.

COPY / PASTE — Week 3 AI Use Log row

```
| YYYY-MM-DD | ChatGPT + Claude | Critique Requirements Specification v1 |
Anonymized Week 2 evidence and draft requirements | One suggestion from each tool |
I accepted, revised, or rejected the suggestion after checking evidence, MVP scope,
and testability. | Week 3 PR |
```

Step 11 — Open the Week 3 pull request

Use this tool	Where you should be	Visible finish line
GitHub website	Repository > Pull requests	Open pull request from docs/week-3-requirements-ai into main.

1. Select Pull requests > New pull request.
2. Set base = main and compare = docs/week-3-requirements-ai.
3. Title: Week 3: requirements specification and AI workspaces
4. In the description, type Closes #<your Week 3 issue number>. Replace the angle-bracket text with the actual number shown beside the issue.

5. Add: Creates Requirements Specification v1, records controlled ChatGPT/Claude critique, and establishes the Week 4 starting point.
6. Select Create pull request.
7. Submit the pull-request URL. Leave the branch and pull request open for the instructor's review unless instructed to merge.
8. Official pull-request directions: <https://docs.github.com/en/pull-requests/how-tos/create-pull-requests/creating-a-pull-request>.

Equal submission checklist

Every student submits the same evidence	Check
Week 3 GitHub issue and linked branch	Complete / Missing
Requirements file at the exact required path	Complete / Missing
ChatGPT account instructions and CampusConnect Project	Complete / Missing
Claude account instructions and CampusConnect Project	Complete / Missing
One controlled critique from each tool	Complete / Missing
One human decision and reason in Section 6	Complete / Missing
One Week 3 AI Use Log row	Complete / Missing
One Week 3 pull-request URL	Complete / Missing

Week 4 handoff

Week 4 begins by opening docs/requirements/week-3/REQUIREMENTS_SPEC_V1.md. You will use FR-01, GR-01, SF-01, and NFR-01 to compare two CampusConnect RAG architectures: a local-first LM Studio path and a hosted rapid-prototype path. Because Week 3 established source grounding, safe failure, accessibility, and MVP boundaries, Week 4 can evaluate architecture alternatives instead of guessing what the system is supposed to accomplish.
